

"Inverted V...

... Infrared Refelctor`s"

Infrared Reflective Marker

Highest Reflection On the market

For the standard equipped future warrior. (Brand name) is an infrared (IR) material to identify troops, vehicles, sniffer dogs and diverse equipment.

Inverted V's are most useful in order to prevent friendly fire and to identify UAV's in night mission.

With normal daylight conditions (Brand name IR-Markers) appears to be similar to a sign or graphic made of black (matt) plastic.

But as soon as it is illuminated by an infrared source (IR-illuminator or IR-

Laser) and use of standard (NVG's) night vision goggles it reflects very high.

The distance corresponds with the energy they are applied.

Due to the matt surface it does not reflect sunlight.

Mounting:

The back (rear side) of the reflectors can be Velcro, adhesive or magnetic.
